

Sundance HVAC Pilot — PulseField Mobile

What we're asking, what's involved, and what Sundance gets out of it.

Pilot partner	Sundance HVAC (Phoenix, AZ) — Dave Martinez, Owner
Pilot size	3 technicians (team rotation, not solo testers)
Duration	Minimum 2 weeks of real-world use
Target window	Late Q2 / early Q3 2026 — completing before mid-July to avoid Phoenix HVAC summer peak
Cost to Sundance	None. Pilot license, support, and training all provided free.

What We're Building

PulseField Mobile is the new mobile app from FieldPulse, designed for technicians in the field. It replaces SMS dispatch + phone-back-to-office + paper forms with a single workflow: full job context on the technician's phone, on-site data capture (offline-capable), customer signature, and same-day data flow back to the office.

What We Need From Sundance

- **3 technicians** using PulseField Mobile on real jobs for at least 2 weeks (team rotation across the crew, not the same 3 every day).
- **Honest feedback** — what works, what doesn't, what gets in the way. Short structured check-ins (15 minutes, twice a week).
- **One end-of-pilot debrief** with Dave, the participating technicians, and our team (60 minutes).
- **Permission to fix and iterate** — if something breaks, we may push an updated version mid-pilot.

What Sundance Gets

- **Free use of PulseField Mobile** during the pilot period and through general availability.
- **First access** — Sundance technicians use the app before any other FieldPulse customer.
- **Direct line** to the product team — fast feedback loop, named contacts at FieldPulse and Relevant Software.
- **Influence on the product** — feedback during pilot directly shapes general-availability features.
- **Reference / case-study credit** if Sundance is open to it (entirely optional, your call).

Pilot Scope (What's In, What's Not)

In Scope (MVP features)	Not in This Pilot
-------------------------	-------------------

- Job assignment with full details on-device
- Job-completion capture: checklist, notes, photos, parts, time
- Offline-capable (basements, crawlspaces, no signal)
- Customer signature capture
- Sync back to FieldPulse Web Platform
- Technician schedule view

- In-app chat with dispatcher
- GPS auto check-in
- Parts inventory lookup
- Customer history view
- Payment collection
- QuickBooks / accounting integrations

Support & Ground Rules During Pilot

- **Training:** Short videos (no manuals) before the pilot starts, plus a 30-minute walkthrough call with the participating technicians.
- **Issue response:** Critical issues addressed within 24 business hours. Named contacts on both sides.
- **Data handling:** Pilot uses Sundance's real jobs and customer data — same protections as the existing FieldPulse Web Platform. No data leaves the FieldPulse environment.
- **Exit:** If the pilot isn't working for Sundance, you can stop at any time. No commitment beyond a good-faith 2-week run.

Next Steps

- Dave reviews this one-pager and confirms in writing (email is fine).
- FieldPulse + Relevant schedule a 30-minute kickoff call with Dave to lock dates and pick the 3 participating technicians.
- Training videos delivered ~1 week before pilot start.
- Pilot runs for 2 weeks; structured check-ins twice weekly; debrief at the end.
